Team Bios

Albert Osakwe (Co-Founder, CTO)
Albert is a software engineer specializing in Artificial Intelligence and Natural Language Processing, with a track record of developing cutting-edge algorithms that solve complex problems. As the lead on algorithm development and integration, Albert ensures Deebo's tools deliver precise and efficient audio editing solutions. His experience includes successful implementation of scalable AI models in creative tech, positioning Deebo to revolutionize workflows for mixing engineers and radio broadcasters. He is also currently employed as a Data Engineer for Meta.

Amadou Toure (Co-Founder, CEO)
Amadou brings a multidisciplinary background in Computer Science, Data Analytics, Computer Security, and Machine Learning. With hands-on experience building secure tools and innovative research applications, he focuses on aligning Deebo's software with user needs. Additionally, Amadou's deep roots in music production and industry connections drive targeted marketing strategies, helping Deebo reach independent artists and creative professionals. Notable achievements include launching music-tech collaborations and bridging the gap between technology and artistry in past projects. He is also currently employed as a Data Scientist for Baltimore Health Analytics
